

Light Beyond Our Sky

Opentinker

Every light in the sky is a message from the past
Every star is a memory –
Light that has travelled billions of years
To reach our eyes tonight.

The Child Who Looked Up

Opentinker

I used to think stars were fireflies,
Lost in the dark.

Now I know —

They are ancient messages written in light.

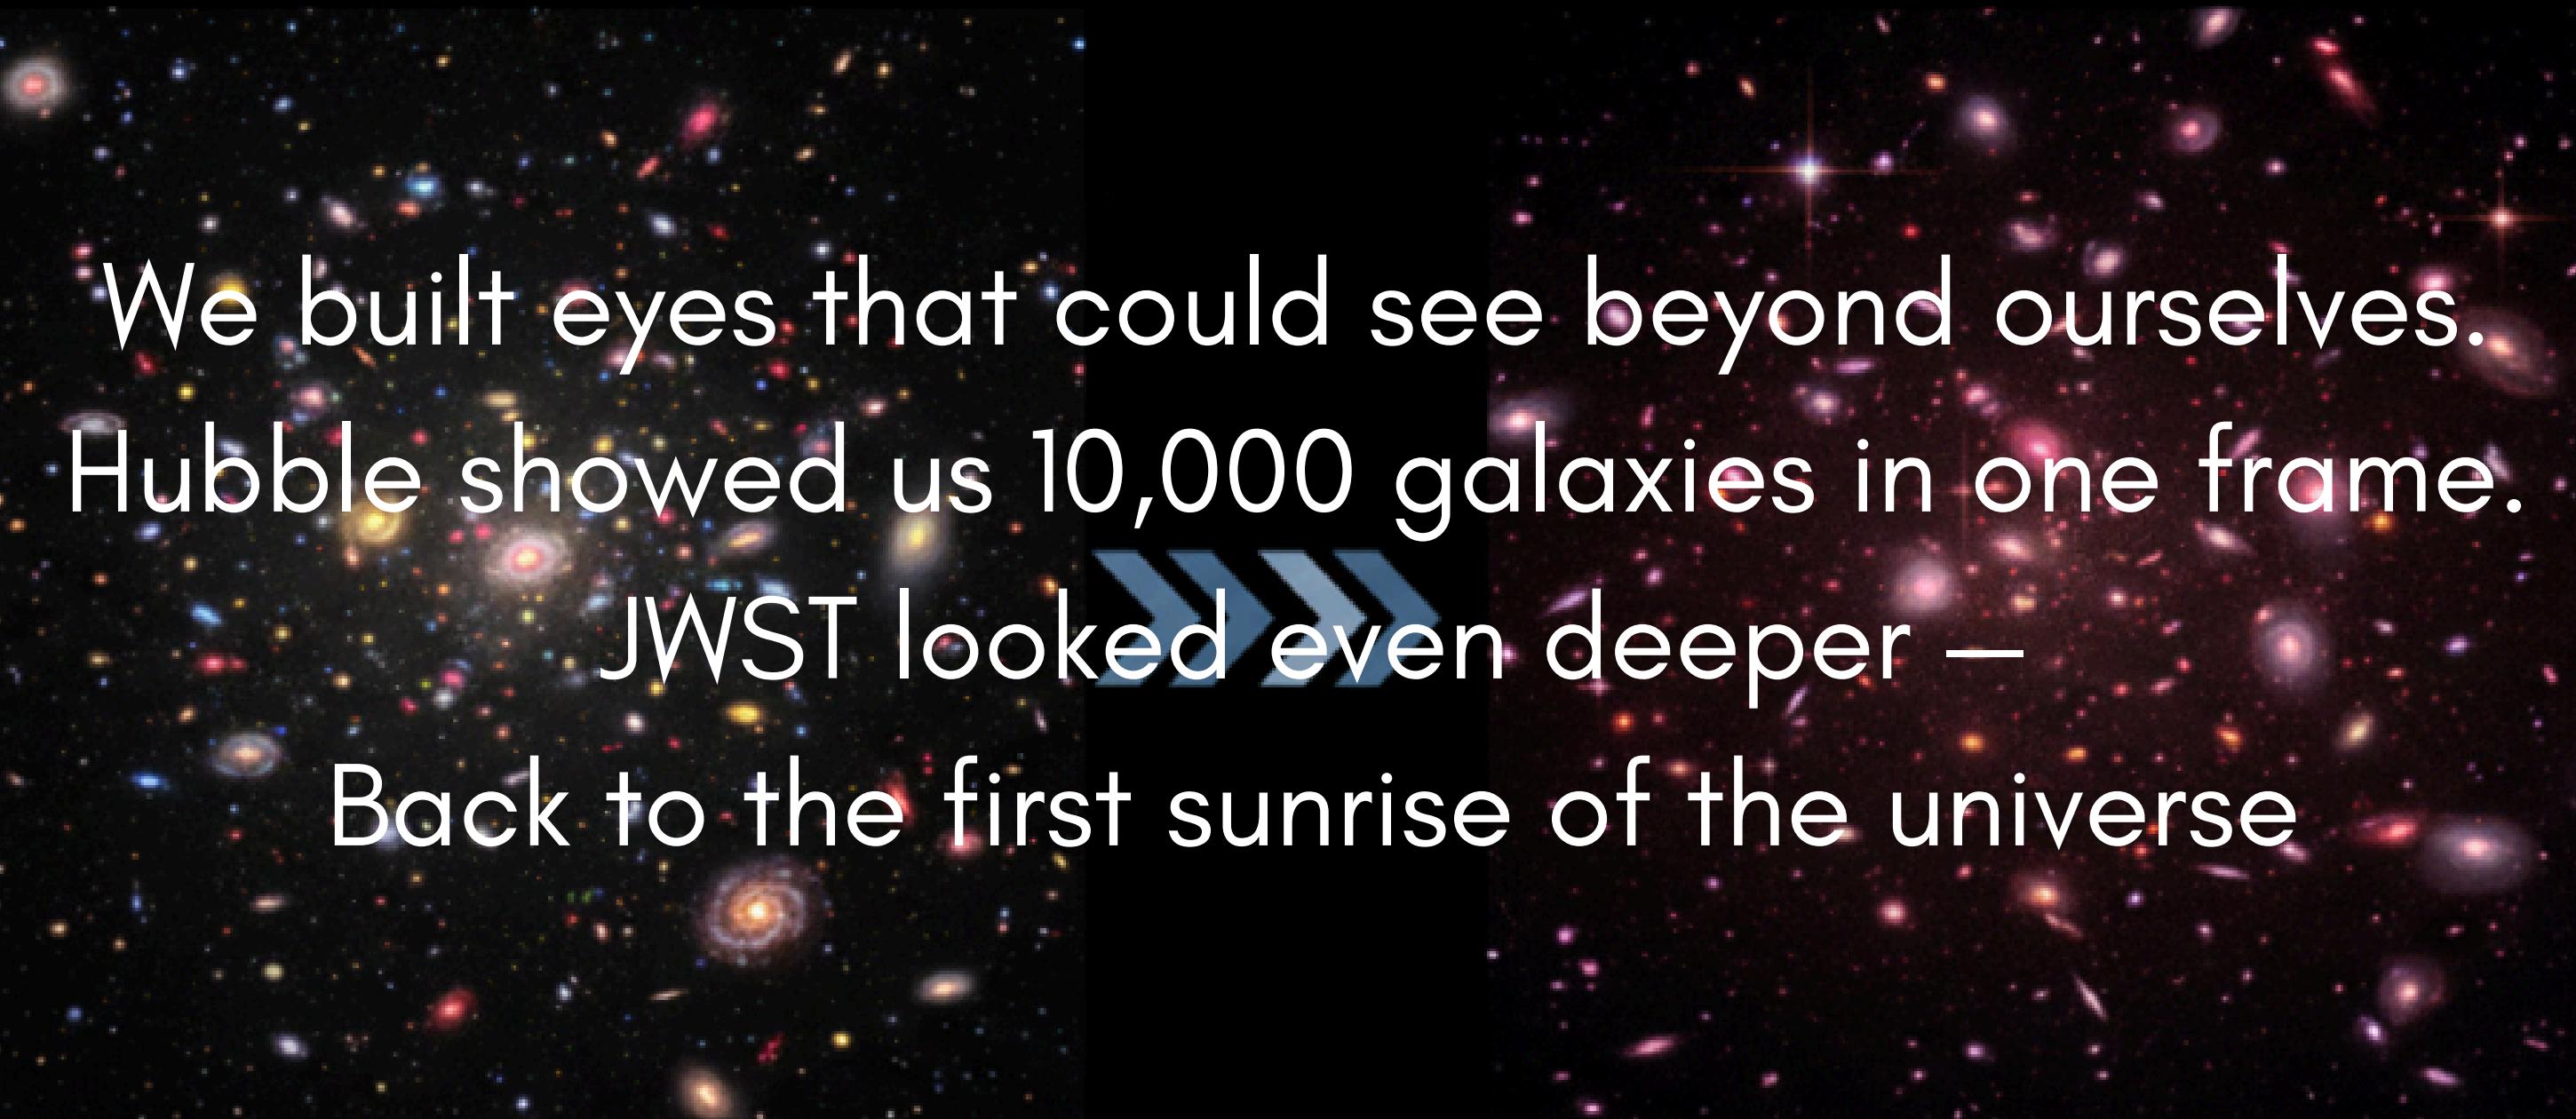

"

Our Cosmic Eyes : Hubble & JWST

Opentinker

Hubble Ultra Deep Field
(Visible Light)

JWST Deep Field
(Infraad View)

We built eyes that could see beyond ourselves.
Hubble showed us 10,000 galaxies in one frame.
JWST looked even deeper –
Back to the first sunrise of the universe

Hubble's deepest image:
10,000+ galaxies in one frame

JWST: Looks 13+ billion
years into the past

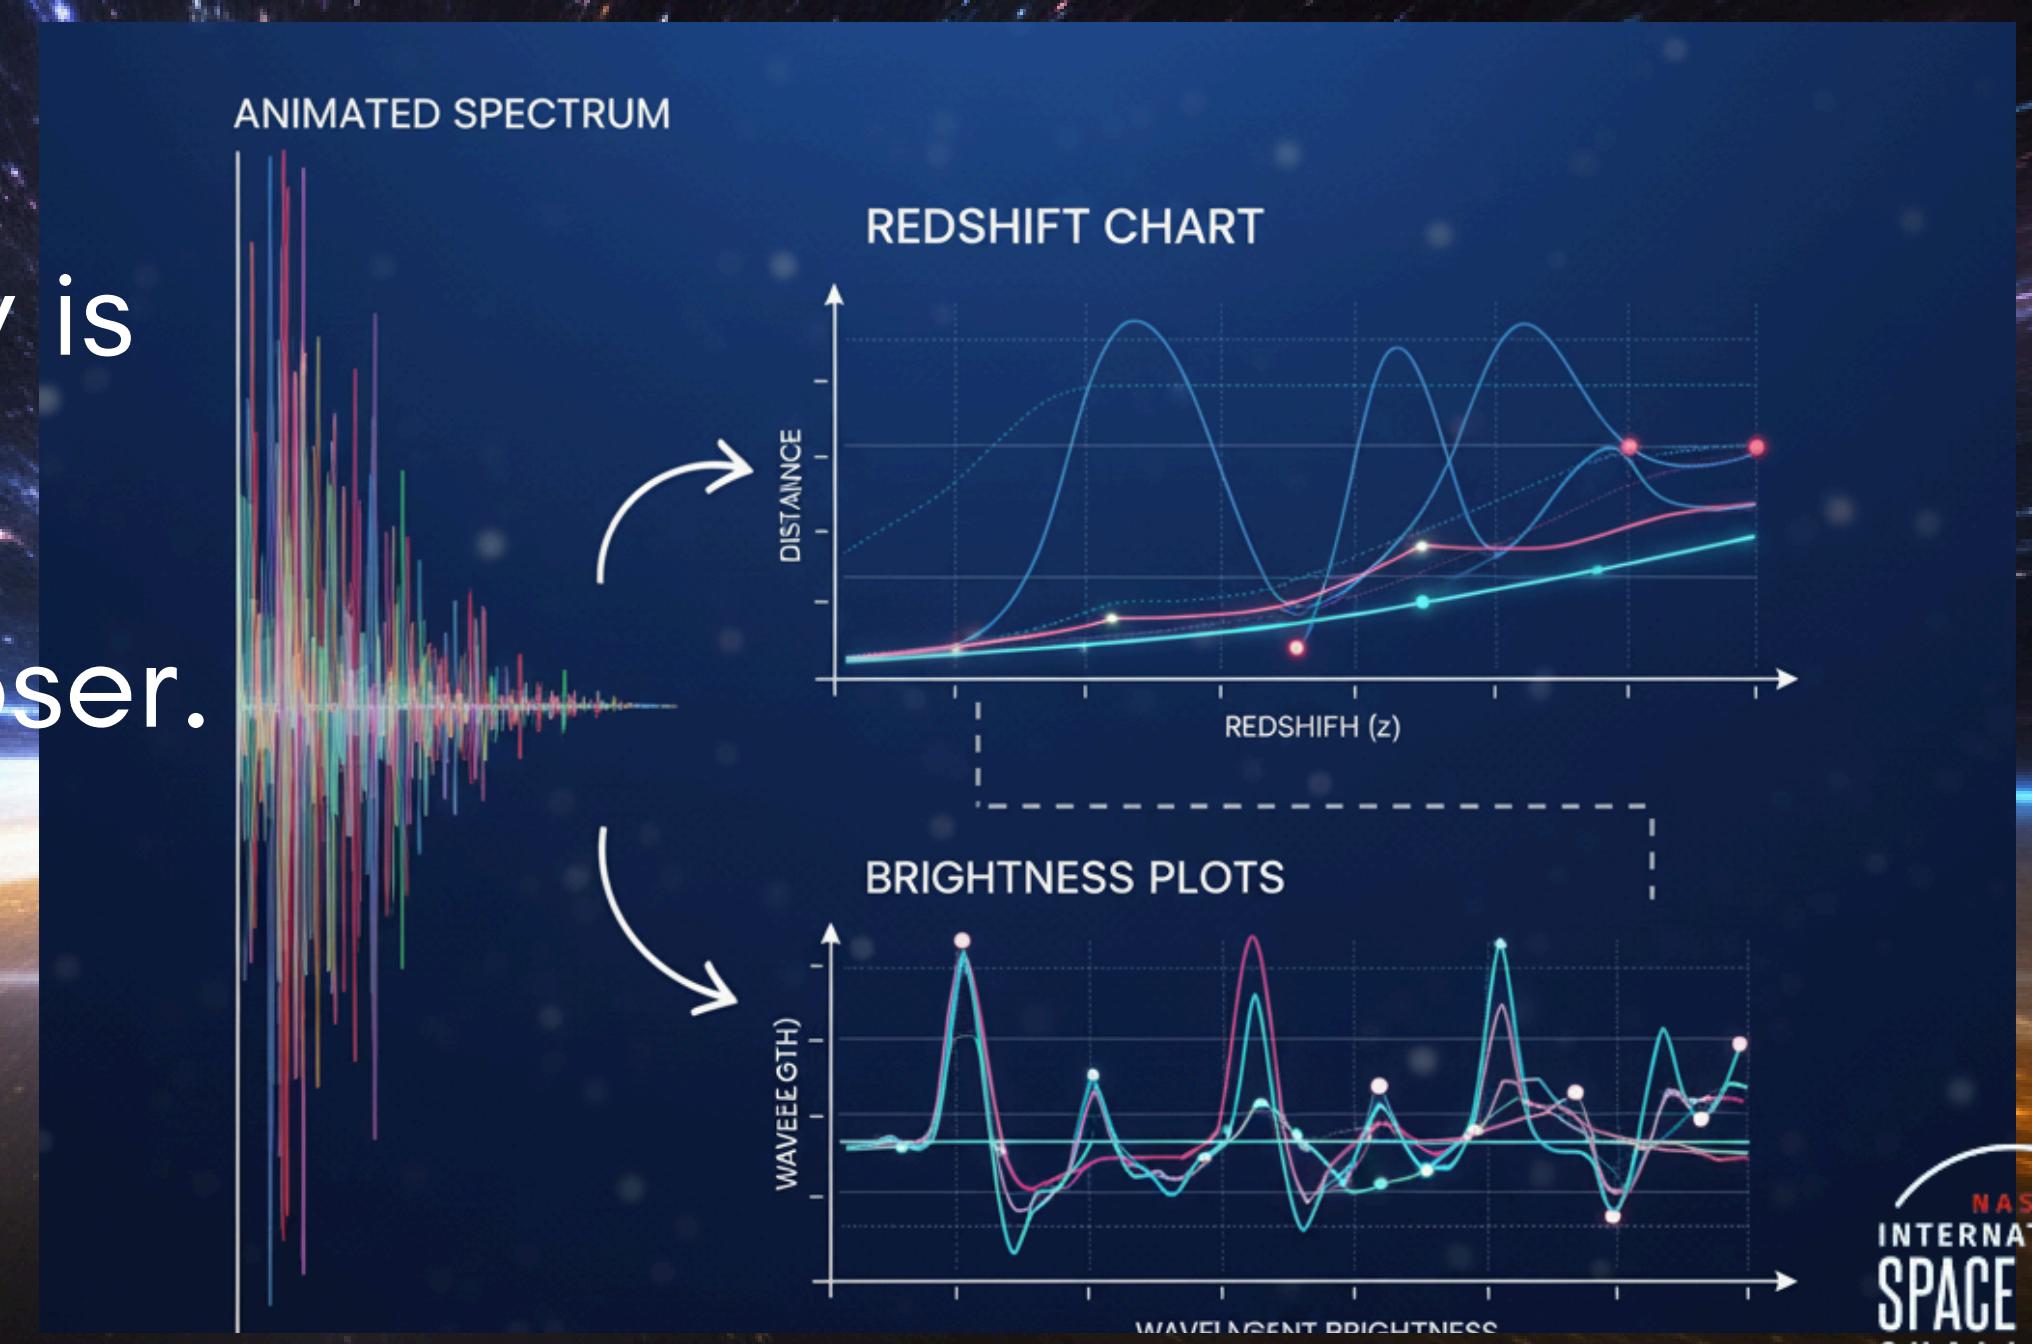

When Light Becomes Data

Each color is a clue.

Red light means the galaxy is racing away –
Blue means it's coming closer.

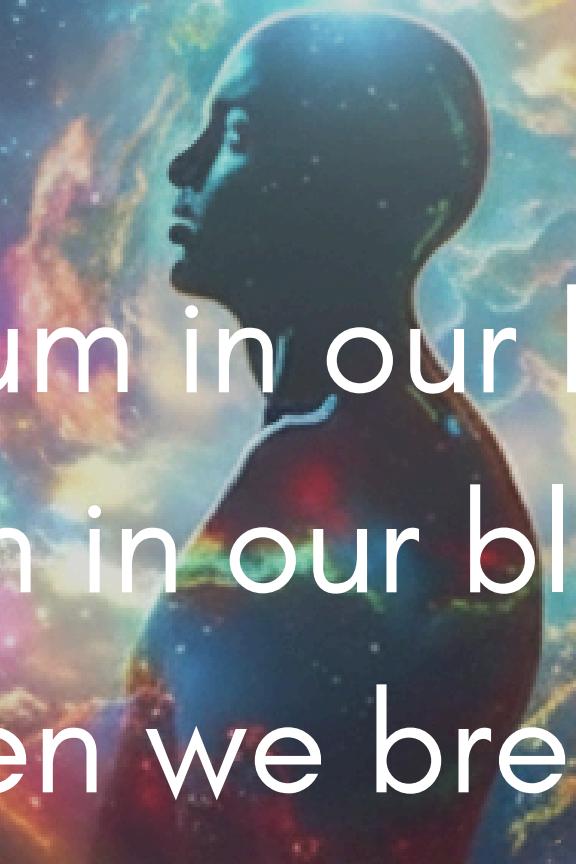

Light is not just beauty,
It's information.

Opentinker

The Universe Within Us

Opentinker

The calcium in our bones,
The iron in our blood,
The oxygen we breathe –
All born from stars that once burned bright

One Sky, One Story

Opentinker

No borders in the sky.

Every telescope, every dream,
Is part of one shared story.

NASA's open data lets anyone — anywhere —
Explore the universe.

Light Still Traveling Toward Us

Opentinker

Some light has not reached us yet.

But when it does,

We'll see new stories written across the sky.

Light Beyond Our Sky

A story told through NASA's open data
